

Eurosash SPECIFICATION

EUROSASH, this authentic sash window retains the charm of a past era. The design of the window is truly amazing in its appearance and performance. Those who see it are sure to be impressed by its style. Eurosash manufactured by Dungannon Windows uses advanced technology which works in harmony with traditional design to provide an authentic looking window with all the benefits from high performance modern materials. The window has been designed to provide optimum strength, superior thermal properties and excellent weathering performance without any compromise to character or appearance.

Thermal properties are enhanced through the use of 24mm 'low-E' argon gas filled double glazed units. The double glazed units are internally glazed to further add to the window's security. Weathering performance is increased by the use of a double pile seal on the edges of each sash and the outer frame. Tilting (inward) sashes are a major feature allowing the outside of the windows to be cleaned from the inside.
